

fully finished door sets & door kits

Morland offers door-sets that have all the traditional benefits of a faster and better quality method of fixing internal doors with the added benefit of no wet trade to finish. Door frames, architrave and stop can be pre finished to co-ordinate with the door leaf.

The key features of a Morland door-set are as follows:

- **Fully finished, colour coordinated frame, door leaf, architrave and stop**
- **Perfect colour matching every time in durable laminate or foil finish**
- **No wet trade requirement**
- **Traditional fixing through lining covered by the door stop**
- **Tongued architraves locates into grooved frame avoiding the need to fix through the face of the architrave**
- **Mechanical dovetails secure the mitred joints on the architrave allowing site to achieve a factory finish**
- **FSC option for the complete door set**
- **FD30 option**

Ironmongery

Whether a door-kit or an assembled door-set the frame will be machined for and fitted with 3 hinges and the relevant striking plates. For solid core doors we fit lift-off hinges to reduce manual handling concerns. The door will be machined and fitted with a mortice latch or bathroom lock. The exact specification can be tailored to suit your requirement. Our scope of supply can extend to include kickplates, handles, levers and letter plates.

Frame, Architrave and Stop

All in MR MDF the frame is made to the width you require. The architraves are supplied cut to size to suit the door opening. The architrave is mitred and morticed for a mechanical dovetail to enable a secure tight joint to be achieved every time.

A wide range is available for the architrave profile and the stop can be 25mm or 71mm depending upon the lining width.

Fire Ratings

Door-sets and door-kits are available with an FD30 or a FD30S rating. A 15 x 4 intumescent strip is fitted to the head and jambs of the lining. Pairs of doors will have the strip fitted to the meeting stiles of the doors. Pairs will be supplied unassembled to avoid being too heavy to manually handle on site. Hinges for firecheck doors are 100mm and CE marked.

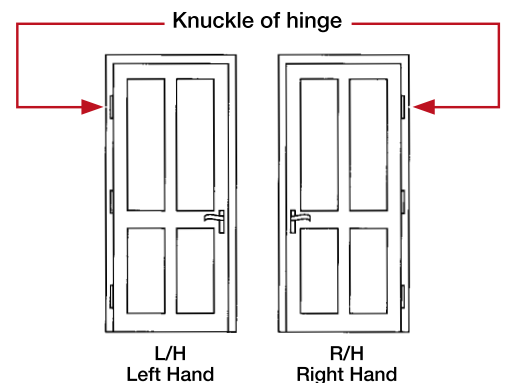

Acoustic Ratings

Improved acoustic ratings are provided by a combination of acoustic seals to the jambs and head of the frame as well as an acoustic automatic door bottom seal.

Handings

Handing is taken from the knuckle of the hinge as the door opens towards you.
